

Senior AI Engineer

Acme Corp | Seattle, WA (hybrid) | Full-time

Posted sample | For demonstration in Career Intelligence

ABOUT THE ROLE

Acme is hiring a Senior AI Engineer to build products that help people understand how their experience maps to open roles. You will own retrieval quality, evaluation, and the APIs that power resume and job-description analysis.

WHAT YOU WILL DO

- Design and ship RAG pipelines over resumes, job descriptions, and interview notes.
- Improve extraction quality for skills, seniority, and requirements using structured outputs.
- Partner with product and design on upload flows, document status, and insight surfaces.
- Set evaluation harnesses for faithfulness, latency, and cost of LLM calls.
- Mentor engineers and write clear design docs for indexing and chat graphs.

MINIMUM QUALIFICATIONS

- 5+ years of software engineering, including 2+ years shipping ML or LLM features.
- Production experience with Python services (FastAPI or similar) and PostgreSQL.
- Hands-on work with embeddings, vector search, and prompt evaluation.
- Comfortable in a TypeScript frontend (Vue or React) when the API contract needs a UI.
- Strong written communication and a bias toward measurable quality.

NICE TO HAVE

- LangGraph, LangChain, or equivalent agent orchestration.
- Document parsing (PDF/DOCX) and chunking strategies for long career histories.
- Experience with interview-prep or recruiting products.

COMPENSATION

Sample range: \$180,000 - \$230,000 plus equity. Benefits include medical, 401(k), and learning stipend.

This is a sample job description for Career Intelligence. It is fictional and not a real opening.
